DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group III (claims 32-33) in the reply filed on 4/10/06 is acknowledged. Claims 1-31 and 34-40 are withdrawn from consideration as drawn to non-elected inventions.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 32 and 33 are rejected under 35 U.S.C. 102(b) as being anticipated by Nabeshima et al (US 5,307,614).

Nabeshima et al disclose a method of producing a textured yarn, including providing a crimped multifilament yarn B and a crimped multifilament yarn A (col. 4, lines 45-49; see Fig. 3). Thus, a step of crimping is performed in order to form these crimped yarns. Alternatively, the yarn B is drawn between rollers 3 and 5 while being heat treated by heater 4 to form a "thick and thin" yarn. Such a "thick and thin" yarn is considered to be crimped, and thus this step forms a step of "crimping yarn to define a textured yarn" as claimed. A step of bundling the texture yarn is disclosed; see interlacing nozzle 7 which functions to bundle the textured yarn to define bundled

Application/Control Number: 10/717,181

Art Unit: 3765

textured yarn as claimed (see Fig. 3). The bundled textured yarn is heated by passing the yarn through false twisting heater 9 (Fig. 3). The bundled textured yarn is deposited onto roller pair 11, which forms a "conveyor" to the extent claimed in that it conveys the yarn downstream. A step of taking up the textured yarn after heating (9) is performed by take-up device 12 (Fig. 3 and see col. 9, lines 33-48).

Regarding claim 33, the bundled textured yarn proceeds through roller pair 8 and yarn B is elongated between rollers 8 and 11 (col. 9, lines 48-53). The roller pair 8 would inherently provide at least some degree of pressure to the yarn, resulting in at least some degree of compression to the extent recited in claim 33. This compressing between the rollers of pair 8 occurs prior to heating with heater 9.

4. Claims 32 and 33 are rejected under 35 U.S.C. 102(b) as being anticipated by Eschenbach et al (US 4,610,131).

Eschenbach discloses a method of producing a textured yarn, including a step of crimping yarn to define textured yarn; see yarn 14 which is air textured by air jet 30, which inherently produces some crimp in the yarn during the texturing process. A step of bundling the textured yarn is performed by jet 48 which entangles yarns 12 and 14 together. The bundled textured yarn is heated by passing the yarn through heater 68 (Fig. 4). The bundled textured yarn is deposited onto rollers 67, 69, which form a "conveyor" to the extent claimed in that they convey the yarn downstream. A step of taking up the textured yarn after heating (68) is performed by take-up device 70 as disclosed in col. 2, lines 11-16 (see unnumbered take-up package shown in Fig. 4).

Application/Control Number: 10/717,181

Page 4

Art Unit: 3765

Regarding claim 33, the bundled textured yarn proceeds through roller pairs 72,74 and 76,78. The roller pairs would inherently provide at least some degree of pressure to the yarn, resulting in at least some degree of compression to the extent recited in claim 33. This compressing between the rollers of pairs 72,74 and/or 76,78 occurs prior to heating with heater 68.

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amy B. Vanatta whose telephone number is 571-272-4995. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Calvert can be reached on 571-272-4983. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
